STUDYX: FIRST GENERAL PURPOSE STUDY SOFTWARE WITH GAMES Generate Games, Practice Tests and Flashcards With the Click of a Button

Remember how much time you spend studying in school? Would you be surprised to find out that there is computer software that can cut your studying time and make studying more fun at the same time? A company called Jeff Computers, started by a Webster University student, has developed study software that makes creating digital or paper flash cards as easy as clicking your mouse. Best of all, it does not require a brand new computer. StudyX will work on virtually any Windows machine.

A typical user of the software can range from an elementary child to a graduate student. It is simple to install the software and then enter the study materials in a question and answer format. Once the notes are entered, you click on a game and start playing. While playing the game, questions will pop up. When you have mastered all of the questions, a message will congratulate you on your accomplishment.

In addition to games, the software allows you to create tests that you can share with your classmates. Creating these files is just as easy as creating the game, and they work directly in Internet Explorer. If you decide that you prefer paper, this is an option as well. StudyX allows you to print study sheets, note cards, fill in the blank tests, multiple choice, and even matching tests.

StudyX changes studying from a tedious and time consuming task, into something all together different. For more information and to download a trial copy of the software, go to <http://www.StudyX.com>

The company who makes this software, Jeff Computers, was started by Jeff when he was twelve. Today, the company is repairing computers remotely and designing websites and hosting them. In addition to this, they have created several other unique programs such as a Countdown program. To view these projects go to <http://www.JeffComputers.com/projects/>

Description

StudyX is a great program to help students study for tests. Useful for any subject from school to work including: memorizing foreign language, practice math, study science terms, vocabulary words, study material for work, and previous test questions...

Get the benefits of note cards without using note cards. A powerful tool for students or teachers. Includes everything from a study game to automatic test generation. The best study software for students studying for tests.

Features include the ability to quickly add questions and answers. Five print options including flash cards, quick study sheet, and three different practice tests. Also, the

interface has been designed as simple as possible, but yet still powerful enough for the power user. Each test is randomly generated, giving the student or teacher the ability to have multiple versions of the test.

StudyX uses some basic artificial intelligence to help you focus on the questions that need the most studying. Notecards/flashcards are a thing of the past; please try out our study software.
